

TECTON DOES IT AGAIN...

The **FIRST** to bring you DVD copies from a Digital Video Recorder, NOW we bring you...**BLU-RAY™!**

Tecton have developed BLU-RAY copying for the Darlex Digital Video Recorder. This will enable days worth of footage to be copied on just one disk. A dual sided blu-ray disk (BD) has up to 50GB worth of storage, more than 10 times that of a normal DVD. BD's are hard coated so there is less chance of evidence getting damaged as they are much less susceptible to scratching. Being able to copy huge amounts of footage to a single media, also lessens the need for carrying out long network downloads and the requirement to remove hard drives.

If you would like to discuss blu-ray further, arrange a demonstration, or have a potential application for using this new type of media then please contact Tecton.
